GROUP OF PATIENTS AND EMPLOYEES AT SANATORIUM WITH
GOVERNOR-ELECT CLYDE R. HOFF

LETTER OF TRANSMITTAL

TO HIS EXCELLENCY,
GOVERNOR J. C. B. EHRLINGHAUS,
Raleigh, N. C.

SIR:

I have the honor to transmit herewith the report of the Superintendent of the operations of the North Carolina Sanatorium for the Treatment of Tuberculosis for the biennium ended June 30, 1936, and the report of the progress of the work on the new sanatorium for the treatment of tuberculosis located near Black Mountain, North Carolina. The report of the Superintendent is accepted as the report of the Board of Directors.

It is our hope to secure additional PWA funds in the amount of \$73,000.00 with which to assist in providing additional facilities at Sanatorium for the care of Negro patients. It is, also, our purpose to request additional funds from the State of North Carolina for the building of a second building for patients at the new Sanatorium. The overwhelming need for the treatment of tuberculosis among our people justifies and makes necessary these requests.

I desire to express my very great obligation to the new Board of Directors for their interest in and attention to the work of the Sanatorium; and, also, our thanks to the Site Committee for their untiring efforts which resulted in the selection of the magnificent site for the new sanatorium.

Respectfully submitted,

L. LEE GRAVELY, *Chairman,*
Board of Directors.

BOARD OF DIRECTORS

Members Present:

Front Row—left to right: DR. CARL V. REYNOLDS, SENATOR L. L. GRAVELY, E. A. RASBERRY, DR. J. R. TERRY.

Back Row: LAURIE MCEACHERN, DR. THURMAN D. KITCHIN, R. E. FINCH, DR. J. W. MCGEHEE AND DR. MCCAIN, *Superintendent.*

Members Absent:

U. L. SPENCE, R. L. HARRIS, MRS. MAX T. PAYNE, DR. M. L. STEVENS, ROBERT M. HANES.

REPORT OF SUPERINTENDENT

*The Board of Directors of the North Carolina Sanatorium,
and of the Western North Carolina Sanatorium,*

HONORABLE L. L. GRAVELY, *Chairman.*

GENTLEMEN:

It gives me pleasure to submit herewith a report of the operations of the North Carolina Sanatorium for the biennium ending June 30th, 1936, and a financial report of the expenditures to this date on the uncompleted Western North Carolina Sanatorium.

THE WESTERN NORTH CAROLINA SANATORIUM

The passage of the bill by the last General Assembly authorizing the establishment of the Western North Carolina Sanatorium was the outstanding event of the biennium in the program for the control of tuberculosis in the State. The bill was introduced by our Vice-Chairman, Hon. E. A. Rasberry. It was largely due to his efforts in the House and to the interest and strenuous activities of our Chairman, Hon. L. L. Gravelly, in both the House and Senate that the bill was passed without a single dissenting vote in the Senate and with only one in the House. The securing of the Grant from the PWA authorities amounting to \$245,454.00 was largely due to the untiring efforts of our Chairman, who made several trips to Washington, both before and after the successful passage of the bill. The total amount available for expenditure, including generous gifts from the Chamber of Commerce of the cities of Asheville and Black Mountain, is \$349,954.00.

The contracts for the construction of the new institution were let on December 3rd, and it was expected that work would begin in two weeks, but a winter of unprecedented severity and duration prevented the beginning of construction until spring. On this account the institution will probably not be ready to receive patients until the spring of 1937. The plans provide for an administration building and a heating plant and laundry sufficient for four hundred patients, and a patients' building to accommodate a hundred sixty-four patients. Since the funds were not sufficient to build a nurses' home, it will be necessary to

use a part of one of the wings to house the nurses for the time being. The price of labor and of construction materials had advanced so much by the time the contracts could be let that it will be necessary for us to secure about \$50,000.00 additional to complete the equipment.

The site for the Western North Carolina Sanatorium is one of the most beautiful in all of Western North Carolina. It is located on a knoll which is surrounded on all sides by magnificent mountain scenery, two and a half miles from Black Mountain and thirteen miles from Asheville. The Committee appointed to select the site, consisting of Mr. Kemp D. Battle of Rocky Mount as Chairman, Mr. E. V. Webb, Kinston, and of Dr. W. W. Sawyer, Elizabeth City, deserve especial credit for their untiring efforts to secure the most suitable site available.

ADDITIONS AND IMPROVEMENTS AT N. C. SANATORIUM

We were also deeply grateful for the appropriation by the last General Assembly of \$95,150.00 for a surgical wing and for other minor additions here at the North Carolina Sanatorium. The contracts for these additions have not been let because we are still trying to secure a Grant from the PWA authorities to supplement this appropriation. If this Grant can be secured we will have available a total of \$173,000.00, and this will enable us also to build an additional wing to our Negro building.

Some much needed improvements in our mechanical plant have been made during the biennium from our Additions and Betterments Maintenance Fund. We secured two practically new Skinner Engines and generators of 100 and 125 horsepower capacity at a very greatly reduced price and also secured from the University of North Carolina without charge two water tube boilers of 168 horsepower capacity each. These were all installed by our own engineer, Mr. R. S. Perry, and his assistants. These improvements and the installation of two automatic pulverizing units for firing of these boilers have increased the efficiency of our mechanical plant to such a degree that we can now be independent of commercial companies for our source of power and light. By reason of this fact we have secured a rate for our night load which reduces by more than one-half our power and light bill. We are transferring one of our replaced 90 horsepower engines and generators to the Western North Carolina Sanatorium, since it will be large enough to furnish light and current for this institution for the next few years.

During the past year we have also completed the installation of automatic sprinkling systems in the portion of our Main Building which is not fireproof and in the Negro unit. At the latter was also erected a 30,000 gallon tank, since otherwise the water pressure would not have been sufficient to secure the successful operation of the sprinkling system. The total cost of the tank and sprinkling systems was \$10,001.62, of which \$4,261.01 was secured as a Grant from the PWA authorities.

We especially wish to express our appreciation to Mr. R. M. Rothgeb, Engineer of the Budget Bureau, for planning and supervising the installation of the improvements in our mechanical plant.

NUMBER OF PATIENTS TREATED

In the four divisions of the North Carolina Sanatorium, white, children, Negro and prison, we treated a total of 1,127 patients during the first year of the biennium and 1,181 during the second year. The total hospital days were 165,737 for the first year and 173,033 for the second. Within the body of the report will be found statistical tables giving in detail the results of treatment and other facts of interest on the patients discharged during the biennium from the various divisions.

TRAINING SCHOOL FOR NURSES

The present arrangement by which we send all of our white nurses who have finished our two-year course to the Moore County Hospital, at Pinehurst, and our Negro nurses to the Lincoln Hospital, at Durham, for their third year is working out very satisfactorily. Under the capable direction of Miss Martha C. Newman and of Mrs. Carrie Broadfoot both training schools have done good work and our graduates are always in demand.

CHANGES IN PERSONNEL

There have been a number of changes in our medical staff. Dr. Thornton accepted a position in the X-ray Department of the Duke Hospital and Dr. Easom and Dr. Plyler accepted positions respectively as Director and Assistant Director of the newly established department of the Industrial Hygiene under the supervision of the State Board of Health and of the Industrial Commission. Dr. H. L. Seay and Dr. A. Papineau, the latter having been on our resident staff, took the positions formerly occupied by Drs. Easom and Thornton on our clinic staff. Dr. A. L. Ormond succeeded Dr. C. G. Milham, who re-

signed to go into private practice at Hamlet. Dr. J. S. Denholm was secured to take Dr. Plyler's place. Dr. W. L. Woodard, our dentist, resigned to accept a position with the State Board of Health and was succeeded by Dr. R. G. Wharton.

Mr. J. B. Womble, who has been our capable steward for several years, resigned, effective June 1st, 1936, so that he could devote more time to his orchard and farm. To take his place we secured Miss Carrie Toomer, who will also serve as dietitian and teach dietetics in our training school.

During the last two years the Rosenwald Fund has been paying for the services of an assistant Negro physician at our Negro unit, but they will not continue to do so after June, 1937. We feel that it is important to train Negro physicians as well as nurses who will be capable and interested in helping with the very serious Negro tuberculosis problems with which we are faced. After the Rosenwald Fund withdraws this aid we trust that the salary for a resident Negro assistant will be provided by the Budget. The first year this position was held by Dr. W. W. Solomon and the second by Dr. R. C. Hairston.

POST-GRADUATE COURSES FOR PHYSICIANS

We have felt that one of the most useful services which tuberculosis institutions can render is the offering of post-graduate courses for physicians who are interested in securing special training in tuberculosis. During the past few years quite a number of physicians have come for periods ranging from two weeks to six months. There are now scattered in most of the counties in the State approximately one hundred physicians who have learned how to give pneumothorax refills and most of these have learned the technique here at the Sanatorium. We have also continued the practice of taking four fourth-year medical students as student internes during the summer and we always have a large number of applications for these positions.

CLINIC WORK

There is an ever-increasing demand for the services of our clinic physicians in all parts of the State, both for school and for adult clinics. We are now more than two years behind with our requests. Heretofore we have been making a study of the school children of all ages. Since experience has taught us that very few active cases will be found in school children under twelve years of age we are planning in the future to study only

those twelve years or over, and in addition those under twelve who are known to have been exposed to tuberculosis and those who have suspicious symptoms. This plan will enable us to study the children in a larger number of counties each year. We are, of course, urging that the contacts of the positive reacting school children and that the contacts of all cases in the State found to have tuberculosis be given the tuberculin test and that a study be made of all the positive reactors.

Our out-patients clinic here at the Sanatorium has grown to such an extent that it is necessary for us to keep one of our three clinic physicians here at the Sanatorium all the time to conduct this clinic. We are greatly in need of two additional clinic physicians and an additional X-ray technician and a statistician.

PORTABLE FLUOROSCOPES

In our adult clinics we are now using portable fluoroscopes which obviate the necessity of making X-ray films on the great majority of the adults examined. With the new type of fluoroscopic screen and with a line focus X-ray tube a fluoroscopic examination is the most effective means of detecting pulmonary tuberculosis except that of making X-ray films. We find that experienced clinic physicians can detect a great majority of even minimal cases of tuberculosis examined by this method, many of which would be entirely missed by the most careful physical examination. It is not only much more accurate, but also more rapid. The fluoroscope enables us to examine more than twice as many in our adult clinics than formerly. On account of using a special hood it is not necessary to have a dark room and it is possible to use the fluoroscopic units wherever 110-volt alternating current is available. The whole fluoroscopic unit weighs less than two hundred pounds and no individual part of the equipment weighs more than seventy-five pounds. We are especially indebted to the officials of the S. & H. X-ray Company, of Atlanta, for their tireless efforts to develop for us the type of portable fluoroscope which we desired.

In our clinic work we have met with hearty coöperation on the part of the medical fraternity of the whole State, of the health officers and nurses, and also of the county school and welfare authorities. We have continued our policy of having the local community pay for the X-ray films of the positive reactors in our school clinics. The parents of the children pay

for the great majority. Many parent-teacher and other civic and charitable organizations have been most coöperative in providing the necessary funds to pay for the films of the other children.

THE NEGRO PROBLEM

Tuberculosis among Negroes is the most serious problem with which we have to deal. The death rate among Negroes is 3.2 times that of the whites. Although Negroes comprise only 28% of the population of North Carolina 53.7% of the tuberculosis deaths occur among Negroes.

Since Negroes are nurse maids, cooks, food handlers and personal servants in other capacities in the homes of the white population, their tuberculosis problem also vitally concerns the white people of our State, not only in a humanitarian sense, but also for their own safety. One of the greatest sources of infection among the whites is the Negro servant.

Negroes also ordinarily have a more acute form of the disease and it usually runs a more rapid course. The acute form is also much more contagious, so that practically all those living in the homes of Negro patients having tuberculosis become heavily infected and often whole families are rapidly wiped out by the disease. The greatly crowded and unhygienic conditions under which most Negroes have to live make it almost impossible for those who are sick to take sufficient precautions to keep from infecting the other members of the household. Such conditions make the shortage of beds for Negroes all the more tragic. There should be at least one sanatorium bed for each of the eleven hundred Negro deaths. Last year we increased our capacity by twenty-five by arranging to move the Negro children to the ground floor of our main building, but this gives us only one hundred fifty beds for Negroes, including the twenty-five beds at the prison division. In all of the county sanatoria in the State combined there are only one hundred nineteen other beds for Negro tuberculosis sufferers. We are running several months behind with our applications for both men and women Negro patients. As a result, more than 90% are in the advanced stage and many of them in a hopeless condition by the time they are admitted.

I am greatly indebted to Dr. S. M. Bittinger, the Assistant Superintendent and Associate Medical Director, to Mr. F. L.

Eubanks, our Purchasing Agent and Cashier, and to all of our physicians, nurses, and other employees for their capable and faithful services.

Both to the former and present members of the Board of Directors I wish to express my deep appreciation for inspiration, guidance and loyal support.

Respectfully yours,

P. P. MCCAIN,

Supt. and Director of the Extension Dept.
